

After changing the storage battery the power button does not work

Why is my laptop power button not working?

Components like batteries, display units, RAM and the motherboard could be faulty and cause your power button to not function properly. Do the following to see if the components of your laptop are damaged besides the power button: Battery Issues: To check for battery problems, turn off your device and plug your laptop to the charger.

Why is my laptop battery not working?

As David mentioned, it is possible that the pins that connect to the battery are bent or broken. Sometimes I have even seen a good amount of dust in them that makes it not connect well. I would attempt to do as David said and disconnect the battery and see if the computer turns on with just the power cord.

How do I Reset my laptop battery?

Press and Release Power Button Reset Sometimes unknown glitches can prevent the battery from charging. An easy way to fix it is to power down your computer, hold down the power button for 15 to 30 seconds, plug in the AC adapter, then start the computer.

Why is my computer not getting power?

Even though your computer runs on a battery, you should ensure that the AC adapter is plugged in correctly, at least during troubleshooting. If you regularly keep it plugged in, but it has wiggled loose, and now the battery is empty, your computer may not be getting power for this reason.

Why is my laptop battery not charging?

If your battery isn't fully charging, the first thing you can try is the Battery troubleshooter in Windows 10. Complete the wizard then restart your device to see if the problem is resolved. Most laptop computers include their own factory diagnostics utilities, too. It is recommended you also use those to test your battery.

Why does my laptop keep getting power?

Plug your tablet, laptop, or desktop directly into the wall if it's not already. In other words, remove any power strips, battery backups, or other power distribution devices between your PC and the wall outlet. If your computer starts getting power after doing this, something that you removed from the equation is the cause of the problem.
