

Are batteries hazardous waste?

Batteries definitely fall under the category of hazardous waste. In February 2010, the UK Environment Agency created battery waste regulations. These regulations ensured that battery waste was disposed of safely and securely. Following these legislations many small businesses who sell batteries were given in-store battery disposal collection bins.

Can batteries go in garbage or recycling bins?

Certain batteries should NOT go in household garbage or recycling bins. This page can inform you on how to manage these batteries safely. Waste batteries can always be recycled or taken to household hazardous waste collection points.

What are the benefits of recycling your battery waste?

Recycling your battery waste helps prevent batteries from being sent to the landfill. When recyclable waste, including batteries, is sent to landfill sites, it has damaging effects on the environment. The chemicals stored within the batteries can leak out into the landfill, contributing to water and air pollution.

What are the regulations relating to waste batteries?

The specific obligations in relation to waste batteries depend on their type, but all require registration with the appropriate environmental regulator via the National Packaging Waste Database.

Are lithium batteries hazardous waste?

Lithium batteries may remain hazardous waste after being discharged because they contain ignitable solvents. The universal waste regulations allow handlers to remove electrolyte from batteries as long as the battery cell is closed immediately after electrolyte is removed, but this is not a likely management scenario for lithium batteries.

Is a battery a universal waste?

Once a battery has arrived at the destination facility (i.e., a permitted treatment, storage, or disposal facility or a hazardous waste recycler) for recycling or disposal, it is no longer a universal waste, but a fully regulated hazardous waste.
