

What if a battery is too small to be labelled?

If the batteries are too small to be labelled, you must print the symbol on the packaging. The regulations set out specific dimensions for the marking of batteries and packaging with the symbol. If you place batteries on the market you must label them with the appropriate chemical symbol or symbols beneath the crossed out wheeled bin symbol:

Can you put a battery on the market?

If you place batteries on the market you must ensure that they comply with the substance restrictions for cadmium and mercury. You must not place on the market: any battery that contains more than 0.0005 per cent (5 parts per million) of mercury by weight.

Which batteries should be labelled?

Rechargeable portable batteries, LMT batteries, and SLI batteries should be labelled with the battery's capacity. b. Non-rechargeable portable batteries should be labelled with the phrase "non-rechargeable. c. Batteries containing over 0.004% lead and 0.002% cadmium should be labelled with their respective chemical symbols (e.g., "Pb", "Cd").

How do I know if a button battery is cadmium or mercury?

If you place a button battery on the market that contains more than 0.0005% mercury it must be marked clearly with the chemical symbol Hg below the crossed out wheelie bin. If you place a battery on the market that contains more than 0.002% cadmium it must be marked clearly with the chemical symbol Cd below the crossed out wheelie bin.

What should be labelled with a non-rechargeable battery?

b. Non-rechargeable portable batteries should be labelled with the phrase "non-rechargeable. c. Batteries containing over 0.004% lead and 0.002% cadmium should be labelled with their respective chemical symbols (e.g., "Pb", "Cd"). The regulation sets requirements regarding extended producer responsibility (EPR).
