

How do you remove a battery from a tool?

Turn the black plastic knob and open the hinged access panel. Unclasp the two metal buckles which secure the plastic lid on the battery case and lift the lid away. On all batteries, loosen the battery cable clamps. Start with the negative terminal, because if the wrench contacts any grounded metal it won't spark or superheat the tool.

How do you replace a battery in a power tool?

You'll need new cells, a soldering iron and rosin-core solder, a glue gun, and some wire and tape. The whole process takes about an hour. Most power tool battery packs use 1.7-in. x .9-in. "Sub C" size batteries. Remove the screws that hold the pack together and yank the top off. Then remove the cluster of batteries and measure one of the cells.

How do you remove a battery pack from a power tool?

Unlatch the battery pack and separate it from the power tool. Remove the small screws around the perimeter of the battery pack case with a small screw driver, and separate the two sections. Unsolder the two wires that are attached to the positive and negative electrodes of the battery pack's terminal plug.
