

Why is my battery giving a false percentage reading?

SEND HELP! SOS It sounds like your battery is giving a false percentage reading. That is extremely common when a battery is going bad/dead. It will say that it has whatever percent left, but then turn off and not back on. It will then also charge faster. It is because, as a battery gets used, it holds less and less of a charge.

How do I know if my battery pack is full charge?

Check the BIOS (F.42 and later) to confirm the setting is set to Full Charge, if it is not, change the BIOS setting to Full Charge. Power on the unit. Press F10 to enter the BIOS. Select the Power option. Full Charge: The battery charge stops at 91~100%. Extended Life of Battery Pack: The battery charge stops at 76~80%.

What happens if a battery goes bad?

That is extremely common when a battery is going bad/dead. It will say that it has whatever percent left, but then turn off and not back on. It will then also charge faster. It is because, as a battery gets used, it holds less and less of a charge. Less and less of its capacity is available or can hold a charge.

What if I run the hp battery check before a full charge?

NOTE: If you run the HP Battery Check before the battery charges fully, you might get a false battery failure result. Plug in the power cord to charge the battery. Charge the battery to a full charge, 99% to 100%. To make sure the computer reaches a full charge, keep the computer attached to the power cord for at least 3 hours.

How do I know if my computer has a battery?

Check the battery charge. Turn on the computer and start Windows normally, click to go to the Desktop, and then mouse over the battery icon in the system tray to view the battery charge percentage. Make sure the battery charge percentage is 99% or 100%.

How do I know if my HP laptop battery is bad?

Make sure the battery charge percentage is 99% or 100%. NOTE: If you plug in your power cord and immediately run the HP Battery Check, you might get a false failure showing the battery is bad. If the battery is in a low-charge state (at less than 3%) you might also get a false reading.
