Are boostli batteries better than lead-acid batteries?

BoostLi batteries have better adaptabilityto poor power grid situations by maintaining better SOH and backup time compared to lead-acid batteries. The solution significantly improves network availability.

Why is there a power shortage in Cambodia?

Cambodia is a tropical country in Southeast Asia with extreme heat waves sweeping across the country during the dry season. This results in the lack of hydropowerwhich causes power shortages in Cambodia. Power shortages during the dry season shortens the lifespan of lead-acid batteries,which may lead to network availability issues.

How long does boostli battery last?

In a poor power grid scenario,the usual service life of lead-acid batteries is only around 2-3 years,while the service life of BoostLi could reach to more than 5 years. Hence,companies can save up to 20-30% on battery investments annually.
