What voltage should a 16V capacitor be rated at?

125°C device with tantalum polymers: 20% voltage derating is recommended for 16V tantalum polymer capacitor in all applications and there is also 33% derating needed at 125°C (no derating to 105°C).

Can a 16V capacitor be used at 125°C?

You can apply maximum 10.7V to the capacitor for the entire operation temperature range to 125°C (voltage derating 20% is covered by the 33% temperature derating). Thus 16V capacitor is NOT suitable for 125°C device due to the high temperature. Need higher rated 20V tantalum polymer capacitor.

Do ABB capacitors include VAT?

Price List - Capacitors All prices do not include VAT. Prices are subjected to change without prior notice. Effective from 1 April 2018. Please see ABB Capacitors product brochure for technical specification and application. All prices do not include VAT. Prices are subjected to change without prior notice.
