Do you need a telecom battery bank?

Having an effective telecom battery bank is essential if you want to avoid service interruptions during power outages and other emergencies. Not only do you need batteries that will get the job done; they need to recharge quickly and have a long life span so you have the most possible uptime.

Should you use a telecom battery?

Telecom batteries should be built to withstand incredibly harsh conditions, including natural disasters. That's because, as the main power backup for your telecom system, they need to be up even when everything else is down. Durability is one reason both AGM and lithium-ion batteries are recommended for telecom use.

Why is maintenance important for a telecom battery bank?

The less durable the battery, the more temperature control, ventilation, shock absorption, and other adaptations will need to be built into their housing. While maintenance is inevitable with any telecom battery bank, minimizing your maintenance requirements can also help reduce your long-term costs for the system.

Should you use AGM or lithium-ion batteries for a telecom system?

That's because, as the main power backup for your telecom system, they need to be up even when everything else is down. Durability is one reason both AGM and lithium-ion batteries are recommended for telecom use. The more durable the batteries themselves are, the fewer requirements for their housing.

Are lithium-ion batteries a good choice for telecom applications?

However, lithium-ion batteries are also more expensive on average and can be cost-prohibitive for some telecom applications. That said, lithium-ion batteries do offer some of the best stability and disaster resilience of any available telecom batteries.

How do Telecom batteries work?

Telecom batteries store energy for use anytime the power is cut off. Think of these batteries as your internal backup power system. They need to offer enough power to keep the system running as long as possible. These batteries also need to be efficient, compact, and durable enough to withstand some pretty extreme environments.
