battery.Press in and push downwardsSlide the battery back in part of the way so you can con wire to the red terminal.2 Power upConnect the Battery Back-up to the mains ele tricity supply using the power cable. And sw tch the power on at the mains socket.The Battery Back-u ck-up power cable

Where is the power supply located on a computer?

Power supply units (PSUs) typically sit at the top of the case; this is why the computer's power cable usually plugs into the top-back section of the case. Refer to your computer's instruction manual for the proper placement of the power supply unit,or look for a rectangular cut-out on the back of the case.

How do I connect a battery to a charger?

Before the main battery is connected to the charger, make sure the charger is set to the correct battery type. Minimum cable cross section between main battery and charger: The largest possible cable lug that will fit through the battery cable glands is size S6-16. That cable lug will suit a maximum cable diameter of 16 mm2 and fit on an M6 bolt.

How do you connect a power supply to a PC?

Place the power supply into your PC case, which will usually fit in from the back at the bottom right of the case. Line up the screw holes. Screw your power supply in place, using four screws, one at each corner. Route your power cables through your PC case to the required locations and plug them in.

How do I connect a PSU to a motherboard?

Otherwise, make sure the following cables are plugged in before placing the PSU inside the case: 24-pin power connector: Supplies power to your motherboard, which then distributes power to all the internal components. CPU power connector: Provides power to the processor. You might need 2x 8-pin connectors, so check your motherboard.

How do you put a power supply in a computer case?

Insert the power supply. The power supply should have a distinct "back" with plugs and a fan, as well as a "bottom" with a fan on it. The "back" should face the back of the case, while the "bottom" should face the internal part of the case. If you have an old power supply in your computer, remove it first. Screw the power supply into place.
