

How effective are kite lights?

So far,they seem to be pretty effective,and robust. If the kite avoids slamming into the ground or other objects,the lights seem to stay put even in strong winds. If the kite slams into the ground in high wind,its a safe bet that the magnets may detach.

Can lights be attached to a kite?

The idea of attaching lights to a kite is not new,however I wanted to put together a simple package that could be easily made from simple electronic components,attached and detached from any kite quickly and easily (with no alterations to the kite) and be reasonably light weight.

How difficult is it to fly a kite at night?

The lights are pretty inexpensive to put together,and many people likely have most if not all the necessary parts left over from other projects. Its not much more difficultflying a well light kite at night vs flying in day light,but the effect is very cool,and somewhat mesmerizing.

Can a kite slam into the ground?

If the kite avoids slamming into the ground or other objects,the lights seem to stay put even in strong winds. If the kite slams into the ground in high wind,its a safe bet that the magnets may detach. I attempted to shoot some video while flying it,however my point and shoot camera doesn't take very good video.

What is a solar garden light kit?

Build your own DIY &quot;Sun Jar&quot; with our Solar Garden Light Kit. It's an interesting project kit that uses sustainable energy to illuminate a white LED. During the day the solar panel charges an AA battery,then when it goes dark the board automatically switches from charging the battery to illuminating the LED.
