

How do I get a DNO letter for solar panels?

To acquire a DNO (Deed of Non-Objection) letter for installing solar panels, start by researching local regulations and utility company requirements. Then, submit a formal application detailing your proposed solar panel installation plans, including system specifications and any relevant technical information.

How do I apply for a solar panel?

Gather Necessary Documentation: This includes technical specifications of the solar panels, inverters, and any other relevant equipment. **Submit the Application:** Forward your application to the local DNO. Ensure all details are accurate to avoid delays. **Await Feedback:** The DNO will review your application, which can take several weeks.

Do I need a DNO application if I have solar panels?

If you have installed solar panels on your home and they are generating electricity, you need to let your regional DNO know. The size of your solar installation (above or below 3.68kWp) determines whether you need to make a DNO application before any work is carried out. This is because the DNO has to monitor fluctuations in the electricity grid.

Why do solar panels need a DNO?

This is because the DNO has to monitor fluctuations in the electricity grid. Any overload in the local grid can cause issues, even so far as tripping out the network! As DNOs are responsible for maintaining the grid's infrastructure, they need to be notified of your solar panels via an application.

Why do I need a DNO certificate for solar panels?

It is important to notify your local DNO so that the extra load and strain on the National Grid can be managed effectively. This is critical for reducing local back-outs, and ensuring that supply in your area is efficient. **Why Do you need a DNO Certificate for Solar Panels?**

Can I install solar panels without permission?

If the electricity supply is adequate, your chosen installer can install your solar panels without any prior permission from the DNO. However, your DNO must be notified within 28 days of commissioning the solar system. This is because such a small-scale system is unlikely to cause any load issues on your current local grid infrastructure.
