Do you need an uninterruptible power supply (UPS)?

If you have important electronics that have to keep running when the power's out, you'll need an uninterruptible power supply (UPS). We've reviewed our recommendations and are confident these are still the best UPS devices you can buy. Many smart devices have built-in battery packs, with modern laptops packing enough cells to last a whole day.

Is an uninterruptible power supply worth the investment?

But if you want to keep your home Wi-Fi network and some other key electronics up and running in the event of an outage, an uninterruptible power supply, or UPS, is worth the investment.

Why should you buy a rack-mounted UPS?

Not only does this rack-mounted UPS keep your important devices running when there's an issue with your power, but it also provides some excellent power efficiency features that can cut energy usage (and associated bills) with up to 95% efficiency in online double conversion mode and 98% in high-efficiency mode.

Is the APC ups be425m a good battery backup?

If you need a UPS and don't want to spend a lot, the APC UPS BE425M Battery Backup is for you. Its 425VA/225W power won't keep your desktop computer running for several minutes after a blackout, but it's perfect if you have a few smaller devices you need to keep powered up.

How many power sockets does the APC ups have?

This UPS from APC has eight surge-protected power sockets, four of which are covered by the battery backup. All of the eight sockets can take standard three-pin plugs, making it more convenient than the kettle leads found on some UPS systems.

How much power does a ups deliver?

And if you need to provide power to more (or larger) devices at your computer workstation than our top pick can handle, this UPS can deliver up to 825 W--it's so effective that we had trouble finding home-office gear powerful enough to overload it in our testing.
