

How much power does a mechanical watch have?

Generally speaking, most mechanical watches have a power reserve between 40 and 50 hours. Without getting technical, it's possible to design a movement to increase a watch's power reserve. The IWC Big Pilot's watch has a seven-day power reserve.

How long does a manual wind watch last?

Manual wind watches from Longines have a longer power reserve supply than automatic watches, but it still lessens and is spent when the watch spring is fully uncoiled unless the owner winds the watch crown by hand before that point in time. The length of time a manual wind watch can run without winding varies, but it is generally less than the average 64 hours of power reserve in Longines' automatic watches.

How much power does an automatic watch have?

An automatic watch typically has a power reserve of approximately 36 to 48 hours. Longines automatic watches, in particular, offer an average power reserve of 64 hours.

How much power reserve does a watch have?

With advances in materials and design of mainsprings and mainspring barrels, it has become a trend to increase the power reserve as much as possible. Some watch brands even use this increased power reserve as a main selling point for their models. For example, the Powermatic 80 series of movements offers 80 hours of power reserve.

What is a power reserve watch?

Power Reserve refers to the running time of a fully wound mechanical watch (manual-wind or automatic). For example, if you fully wind your watch and place it on your dresser, how long before it stops running and needs to be wound again - that is the power reserve. This is determined by the amount of energy that can be stored in the mainspring.

How long can you leave a watch without a power reserve?

The longer the power reserve, the longer you can leave your watch between wearing or winding - regardless of how much power reserve is left when you leave it. How much PR you "need" depends on a) whether you give a damn and b) your watch wearing habits. Generally speaking, most mechanical watches have a power reserve between 40 and 50 hours.
