Reinstall system without battery

Can a battery be removed before a BIOS update?

You're going to need to replace the battery and then update the BIOS/firmware on the laptop. Same goes for HP and Dell laptops. P.S: You can remove the battery at your own discretionbut it won't change the fact that the system will want a battery backup when performing a BIOS update. removing the battery will allow the update to go through?

How to update BIOS with a battery that only reads 0%?

Any idea how to update BIOS with a battery that only reads at 0% (but works fine otherwise) on Asus? With Dell BIOS updates you can run the BIOS update exe at the command line and add /forceit:The update should start and ignore the lack of a battery @10% charge.

How to upgrade BIOS without battery?

So, please anyone help me how can I upgrade my BIOS without battery. Run the bios exe via CMD and add /forceit in the end. I already tried as you said via CMD and also try from cmd from bootable DVD drive. But its not work. Its ask to insert system battery.

How do I flash a BIOS without a battery?

Save the file in an easily accessible place and run command prompt as Administrator. In the command prompt,type the biosfilename.exe /forceitand Press Enter. A1230D12.exe and /forceit is the switch to force the flashing process. That should flash the BIOS for Dell PCs without battery. That's about it!

What happens if you remove a battery from a laptop?

If you removed the battery entirely it may bypass this. In essence,you can't,it's a failsafe mechanism to prevent the user from bricking the system in the event that the power does cut out and there isn't battery backup. You're going to need to replace the battery and then update the BIOS/firmware on the laptop. Same goes for HP and Dell laptops.

Is there a way to bypass battery restriction?

The battery restriction is baked into the firmware stack,I don't think there's a way to bypass it. The INF files just stage the firmware,they won't perform the update itself. Let me see if I can find some better advice for you Take apart the surface book from base try to plug charger to bottom of screen to see if it charges.

Windows will automatically see it as a second battery. Now disable the Surface battery in device manager: - Launch Device Manager (right click on Start Button) - Expand Batteries list - Delete ...
