

Why does my roof leak after installing solar panels?

There are various reasons your roof could leak after installing solar panels. They mostly have to do with poor installation where mounting holes are not sealed properly, the top is incompatible with solar panels, or the roof is old and not designed for solar panels.

How do I fix a roof leak after installing solar panels?

If you're experiencing roof leaks after installing solar panels, contact a professional roofing contractor who specializes in solar panel installations for a thorough inspection. They can identify the source of the leaks and recommend appropriate solutions.

What causes a roof leak?

There could be any number of causes for a leak, including damage caused by walking on the roof, dragging solar panels, or having a tile break in the underlayment. These are not issues you can resolve yourself, and since your warranty would cover these issues, your first call should be to your installer.

Do solar panels damage your roof?

While solar panels themselves will not inherently damage your roof, an improper installation can lead to problems down the line. It is crucial to ensure that the installation is done correctly by a professional, or with thorough research and proper planning if you choose to do it yourself.

What causes a post-solar panel leak?

Exposure to weather conditions and UV radiation over time can cause sealants to degrade, leading to gaps that allow water to infiltrate and cause a post-solar panel leak. Regular inspection and maintenance of the sealants can help prevent this issue. Roof age and condition also impact the risk of a post-solar panel leak.

How can I prevent post-installation roof leaks?

To prevent roof leaks after installing solar panels, regular maintenance, proper installation, and professional oversight are key factors. Preventing post-installation roof leaks is possible with awareness and proactive steps, allowing renewable energy benefits while safeguarding your property.
