

Can I expand my solar system?

If your solar system isn't quite meeting your electricity needs, it's almost always possible to expand your system to incorporate more panels. Adding panels to an existing system is more common than you might expect. We'll discuss why expanding your array is a great option, and we'll address the best ways to do so.

Why should I expand my solar panel system?

There can be several reasons to expand your solar panel system, maybe your electricity needs have changed, or your family has grown and you need your electricity to supply to match.

Can I add solar panels to my existing solar system?

It's relatively easy to add panels to an existing system; many of the more difficult steps, such as tying your system to the grid, will already be complete. You can explore several options for a system upgrade, depending on your available roof space and the specifications of your solar system.

What happens if I expand my solar system?

If you installed solar panels under the old net metering policy and expand your system by more than 10% or 1 kilowatt (kW), you'll be moved to the new program, Net Billing, or NEM 3.0, resulting in lower solar savings. How much can you save with local solar incentives?

Can I add more solar panels if my roof is old?

Do not add more solar panels to your system if your roof is old, it is a leased system, or if you do not have enough roof space for extra panels. Contact your original solar installer to add more panels to your system.
