

Do you need planning permission to install solar panels on your roof?

An increasing number of people are investing in solar energy. More and more homes are having solar panels, or solar tiles, installed on their roofs. Of course, with such installations, the topic of planning permission and building regulations often comes to the surface.

What is needed to install solar panels on UK homes?

Here's a quick guide to what's needed to install solar panels on UK homes: An installer should visit to determine if the property is suitable for solar panels. They will look at the size and orientation of the roof to decide the best location and angle for installing panels.

Can I install solar panels if I don't meet building regulations?

Your local authority can also apply for a Confiscation Order to take away any money you've earned with your system - so there's absolutely no benefit to installing solar panels that don't meet building regulations. It's crucial that your solar installation follows all building regulations.

Can solar panels be installed without planning permission?

Solar panels need to receive ample sunlight throughout the day and where possible should not be obstructed by shading from trees or other buildings. Most residential properties in the UK can have solar panels installed without planning permission as they are considered to be a 'permitted development'. The exceptions are:

Do solar panels need a building regulations certificate?

A year later, the Climate Change and Sustainable Energy Act 2006 brought microgeneration systems like solar panels under the umbrella of the Building Regulations. You should receive a building regulations certificate, known as a completion certificate, for your solar panel system.

How much space do you need for solar panels?

You will also need around 10 to 25 square meters of roof space available. The shape of the roof is not important. If there is any shade over the solar panels, this can have a large effect on the overall efficiency of the system.
