

How to charge solar lights?

The best way to charge solar lights is with sunlight. However, even if you don't have access to direct sunlight, you can still charge your solar lights in other ways. In overcast or winter weather, you can easily charge solar lights with indirect sunlight. What's more, you can even charge your solar lights with no sunlight at all!

What is a solar charger & how does it work?

Enter the solar charger - a nifty device that generates electricity through the power of sunlight. The sun's rays are turned into energy that can then be used to charge various gadgets including mobile phones, laptops and tablets. This must-have can be as compact as a typical portable charger yet remain reliable and long-lasting.

Can You charge solar lights without sunlight?

In overcast or winter weather, you can easily charge solar lights with indirect sunlight. What's more, you can even charge your solar lights with no sunlight at all! Place the solar panels directly underneath a household light to charge them as quickly as possible without sunlight. Place your solar lights as close to the light bulb as possible.

Can you use artificial light to charge solar lights?

You can also use artificial light to charge solar lights, but it will take longer than charging in direct sunlight. These lights offer 8 different flashing patterns, so you can tailor your lights exactly as you want them. Best of all, they're among the best solar lights I've tested and have stood up to years of bad weather and low temperatures.

Can You charge solar lights indoors?

While you can charge solar lights indoors, over time it can amount to a solar light mistake. Charging solar lights with artificial light not only leads to dimmer lights with shorter runtime, but it can even damage them over time.

How long do solar lights take to charge?

It's otherwise a very inefficient way of charging a solar panel. How quickly your solar lights will charge with this method depends on the specific model and lights that you're using. For best results, charge your solar panels for at least 12 hours if you're using incandescent lights.

The good news is you don't need direct sunlight to charge solar lights. While direct sun is by far the best way to charge up your solar lights, they'll still work on cloudy days or with artificial light.
