

Why is there a small hole in my battery?

If you had a battery/alternator fault and the charging current was such that the acid electrolyte started to heat up in the battery, the small hole allows the gas (hydrogen chloride - yikes!) to escape. Some batteries use an 'overflow' type pipe to direct that possible liquid elsewhere. Thanks, I removed them and all is well.

Is there a button inside the battery?

Yes, there is a button inside and you should feel a click. It might not be located right under the pinhole, so you can move around the paperclip until you find it. Hit 'Like' if you find the answer helpful! Click on 'Yes' if the comment answers your question! Oh weird... OK. Well not sure what I did, hopefully not poking a hole in the battery.

Are these tiny holes a light?

They are not lights... they are 2 times tinier than the light pin holes and they don't light up. The holes are very very small. So much so that you will mistake them for dust particles. Without zoom, it just looks like dust... Zoomed image... 02-04-2019 03:05 PM @sharpo1 They appear to be tiny microphone holes.

What is a pinhole button on a laptop?

This pinhole button is an access to the switch to turn your battery on or off because the battery could not be physically removed from the laptop unit. Therefore, once it is turned off, definitely, there will be no access to gain power and make your laptop work...

What does it mean if a battery is over charged?

An overcharged battery free gasses hydrogen and oxygen. Hydrogen is produced during normal charge and discharge cycles. Speedy fingers. usually mean the small plugs fitted to the overflow/expansion outlets at the top sides of the battery. Normally 1 or 2 small red plastic plugs that can just be pulled out with pliers. May be taped up for security.

Can a battery be topped up with distilled water?

Old charging systems regularly overcharged the battery and topping the battery up with distilled water was a weekly task, the batteries had removable screw plugs in each cell to allow this. With modern charging systems the batteries are now made "sealed" and topping up is not possible.

So I tried removing my phone battery of the Samsung A20 but I think I punctured a tiny hole. No flames, however there is a smell to it. Should I dispose of it.

Battery reset pinhole - Simulates removing and reinstalling the battery. Insert a paperclip into the hole and press for four seconds.
