

How long does a car battery last?

The lifespan of a car battery typically ranges between three and five years on average. No battery lasts forever, just like any other thing in the world.

When should you replace a 5 year old car battery?

Since car batteries typically need replacement every three to five years, you might wonder if it's time to replace your five-year-old battery. At five years, the battery is nearing the end of its lifespan. While some batteries may last longer with proper maintenance, it's generally wise to start considering a replacement.

How often should a car battery be replaced?

Whether your car works as new or its lights and other electronic devices are starting to show signs of age, there is no bad time to check your battery's condition. Changing your car's battery every 2-3 years will keep it running at its best and help you avoid embarrassing roadside or car park breakdowns. Is it time to replace your car battery?

How long does a car battery last if left unused?

If you know your car battery is relatively new and has been kept in good condition, it can probably sit unused for about two weeks before it goes flat, however in other cases a car battery can last between two weeks to four months. If you've left your car unused for over two weeks, it's quite likely you'll need professional assistance.

When can a car battery go bad?

A car battery can go bad after 1 year or less if care is not taken. It's shocking and you wonder what went wrong, especially when the battery is less than a year old. It is noteworthy that when a battery keeps dying, it's time to run a check and get it fixed.

How often should a car battery be charged?

A 30-60 minute drive once a week should be enough to maintain a healthy battery. Limit short trips. Quick car rides to the shops and local places may prevent your car's battery from fully charging. Don't use electronics with the engine switched off.
