

# The newly purchased solar power supply does not light up automatically

Why do solar lights stop working?

Solar lights are environment-friendly, cost-effective, and a great way to light up your backyard or garden. Nevertheless, a couple of reasons can cause them to stop working, including dead batteries and dirty solar panels. This article contains excellent information about how solar lights work, and we're sure you'll find it useful.

Why are my solar lamps not working?

If you've recently purchased solar lamps and they're not working, one common reason could be the presence of a pull tab on the battery. A pull tab is a small piece of insulator that is specially designed to prevent batteries and circuits from energizing -- protecting them during shipping and storage.

How to fix solar light not working?

It's a simple trick to clear out any small glitches that might be messing with your light's performance. Here's all you need to do: Turn off the light, count to a few seconds, and then switch it back on. This quick reset often fixes those pesky little issues and gets your solar light running smoothly again. [How to Fix Solar Lights Not Working?](#)

Why is my solar-charged light not working?

Another possible reason for your solar-charged light stops working could be the LED bulb is defective or not working. In this scenario, even if your panel, the battery, and the sensors are fine, your light will not operate. The downside here is you have to change your lights unless there is a chance that LED bulbs could be replaced.

Why are my solar panels not working?

If your solar panels are covered with dirt, it can hinder their working. A layer of dirt or dust on your panels prevents sunlight absorption, leading to them not getting charged and not working. This dust could get so dense and sticky that even a little light cannot reach your panels.

When should you change your solar battery?

After their normal life span (typical couple of years) they tend to stop working or start performing poorly. If you see declined brightness in light, then it's a time to change the batteries. But before you buy new rechargeable batteries test the solar light by putting alkaline battery (regular batteries).

Solar iBoost+ uses electronic control technology to cleverly allow only the same as the excess power generated to be diverted to the immersion. As this excess energy varies, Solar iBoost+ ...

A blown fuse will terminate all power from flowing through your system and not allow the light to come on at all; however, it is a simple replacement with a new fuse the proper size and your system will be up and
