

What is an uninterruptible power supply (UPS)?

However, typical desktop computers, routers, and similar devices still need to be plugged into a power source all the time to work. That's where an uninterruptible power supply (UPS) comes in. Its main function is to act as a big battery that powers your devices when your electricity goes out.

Do smart devices need an uninterruptible power supply (UPS)?

Many smart devices have built-in battery packs, with modern laptops packing enough cells to last a whole day. However, typical desktop computers, routers, and similar devices still need to be plugged into a power source all the time to work. That's where an uninterruptible power supply (UPS) comes in.

Does a sinewave ups have a battery backup?

Battery backup extends to five outlets at once, and you can monitor them all using the front-panel LCD readout. This isn't a sinewave UPS, so its power isn't quite as "clean" as some UPS systems, but that means it's less well-suited to sensitive electronics at the professional level.

Are UPS battery backups reliable?

We've chosen some robust and ultra-reliable UPS battery backups from some of the most respected brands in the industry. These systems offer robust battery backup for all your devices, fast-charge ports for portable devices, and advanced surge protection, among other great features.

Is the APC ups be425m a good battery backup?

If you need a UPS and don't want to spend a lot, the APC UPS BE425M Battery Backup is for you. Its 425VA/225W power won't keep your desktop computer running for several minutes after a blackout, but it's perfect if you have a few smaller devices you need to keep powered up.

Is an uninterruptible power supply worth the investment?

But if you want to keep your home Wi-Fi network and some other key electronics up and running in the event of an outage, an uninterruptible power supply, or UPS, is worth the investment.
