

What is the work of installing solar panels like

How does a solar panel installation work?

The installer will have to lift some of the roof tiles to fix the anchors to the rafters in the loft. This will give the solar panel mounts a stable foundation, and will make sure they don't get damaged in stormy weather. Once the roof anchors have been fixed to the property, the installer will attach the solar panel mounting system to them.

Can solar panels be installed on a house?

If you're getting solar panels installed onto the roof of your house, the installers will need to construct scaffolding around the building before they can crack on with the process. This will take the most time out of all the steps - usually about a day - but will mean the installers can have safe and secure access to the roof.

Why should you hire a professional solar panel installer?

When you hire qualified professionals, you'll get a secure, efficient, certified solar energy system that should ensure your panels work as well as possible. This will benefit you financially, make it easier to sell your property, and increase the value of your home.

Is it a good time to install solar panels?

Hopefully you feel more confident about the process of installing solar panels. With 69% of people telling our National Home Energy Survey that they're likely to buy or rent a home with solar panels, now is a great time to go solar.

Are solar panels a good idea?

Installing solar panels is a great idea to increase your home's capacity for renewable energy, and possibly save money on your energy bills.

Are solar panels a DIY job?

"Installing solar PV panels is not a DIY job," David Hilton warns. "It is possible to buy your own materials and ask an installer to put it all in but that will be your risk if it does not fit."
