

# Where can I see the battery production time

How do you know if a battery has a production date?

Every battery's production date is etched on to it, usually on a side edge or negative terminal of the battery. The manufactory date contains 4-6 digits on average. However, the production date happens to be a bit tricky. Instead of using plain dates, the manufacturers incorporate code like digits for the production date.

What is a production date on a battery?

The production date on a battery refers to the date when it was manufactured. It is an order of year, month, and date. Usually, the batteries come with a production date sticker on either of the sides. If so, it would include only two digits in the format: 6/10 means, June 2010.

Does a battery have a manufacture date?

Yes, there is a manufacture date on batteries. The date is stamped on the top of the battery and is almost always the first number and first letter. The first number is the month and the letter is the year. For example, if the code is 3L, the battery was made in March of 2013. If the code is 11J, the battery was made in November of 2010.

How do I Check my Windows 11 battery status?

If you have a Windows 11 device that runs on battery power, you can check the battery status to see the estimated time and percentage remaining battery life left to know when to charge the battery. If you only want to see the percentage of remaining battery, you can disable showing the estimated time remaining.

How long does a battery last?

The battery can be used but will last less long than new. The manufacturing date is noted in most cases with the month and year, preceded by 'PD' (Production date). These dates are engraved or printed on the side of the battery.

How to show remaining battery time in Windows 11/10?
